EXCELLENCE IN INDUSTRIAL SOLUTIONS

PRODUCTS AND SERVICES

Since 50 years Reimann has been producing products and services for metal, steel and pipeline constructions. With our long-standing and comprehensive know-how, we are dedicated to develop innovative products with high-quality in order to meet the requirements of our customers. Today, we have become one of the most important suppliers for the German as well as European machine construction market.

INDUSTRIAL FURNACES

Often the complete or partial renovation of an existing industrial furnace is a very cost-effective method in order to avoid failures or breakdowns of production plants. We produce components in our own workshop and assemble them at your premises. If a renovation is not enough, we design the production of new standard or special furnaces together with you. Our service crew is ready to support your team around the clock as well as in case of any failures or for regular maintenance works.

BOILER PRODUCTION

For several years we have been manufacturing transformer boilers for different enterprises. Our production site with 5,280 m² and a ceiling height of about 15 m offers the necessary space to enable the production of large projects. Integrated heavy-duty cranes allow us to transport parts of up to a total weight of 64 t. We can produce transformer boilers that have the following dimensions: length of up to 16.5 m, width of up to 3.2 m, height of up to 5,8 m and a total weight of 64 t per part. We offer comprehensive quality checks and assure that all welding seams are produced precisely and faultless.

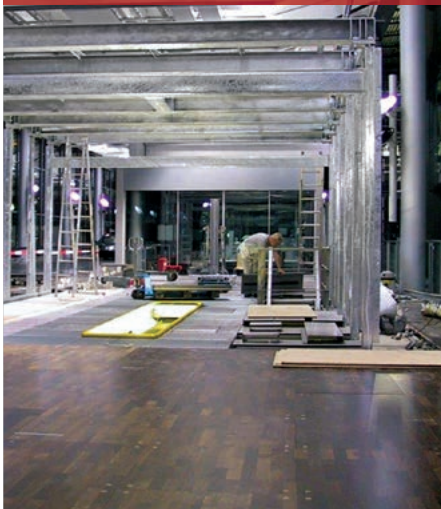

SHEET METAL PROCESSING

With our state-of-the-art machinery we can process sheet metals according to your individual requirements. On site we offer one-stop lasing, creasing as well as bending. Thanks to our brand new Trumpf bending machine TruBend 5085 we are able to produce even faster and more precisely. We can laser sheet metals of up to 22 mm construction steel and crease all materials with CNC-controlled machines. With our hydraulic round bending machine our team takes care of precise bending of your products: bending, cylinder rounding as well as cone rounding.

STEEL CONSTRUCTION

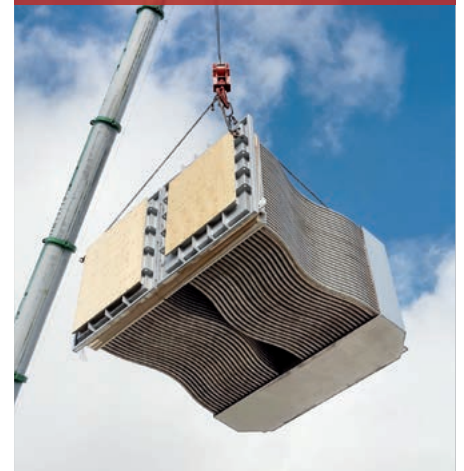

We offer planning, production and assembly of steel constructions as a one-stop offering for industry and commerce. That is why we can meet special requirements for your projects. Our portfolio of services comprises of steel constructions for plant construction, for steel composites and for architectural steel constructions. We strive to produce modern, efficient and environment-friendly steel constructions.

PIPELINE CONSTRUCTION

Pipeline construction is our profession. We manufacture custom-made or standard parts according to your specifications. We also offer our construction and planning services for your project. As a company certified for welding, we can produce pipelines for all pressure stages and for dynamic or thermal loads. The scope ranges from DN25 to DN500 in the areas of steel, galvanized steel, stainless steel and copper, containers and apparatus with our certificate of German TÜV according to AD2000-Technical Bulletin HP. We have been certified to a product-related quality system. We also carry out several welding procedure qualifications.

ASSEMBLY

We support you with assembly and services at your premises. In case of short-term failures, regular maintenance and repair we offer a 24-hour service. Our technical services at customer site speak for themselves: for more than 45 years we have been working in the field of machine and equipment changeovers as well as complete plant removals. In that case we offer the full range of service for disassembly, packaging, transport, reassembly and bringing production back into service with test runs.

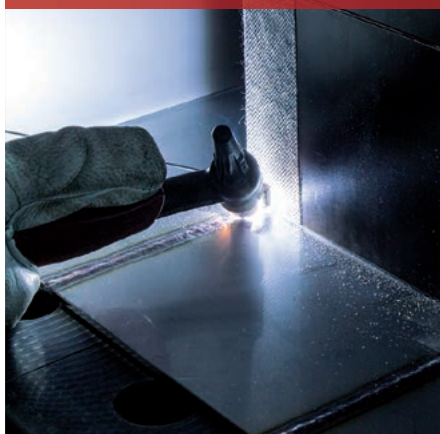

TECHNICAL INSULATION

Industrial processes are not possible without pipelines: Liquids or industrial gas are transported through the pipelines and enable the flow of material and energy. Pipelines also connect different components with each other. Therefore, an efficient and powerful insulation for industrial pipelines is essential. REIMANN has specialised in heat and cold insulation for pipelines. With our modern machinery we produce insulation systems for cold systems, boilers, tanks, pipeline systems as well as heat exchangers.

STAINLESS STEEL PRODUCTION

Stainless steel offers very good hygienic characteristics, is resistant to corrosion and acids and has a high stability. Therefore, it fits in an excellent way to the needs of the food processing and the beverage industry as well as those of the chemical and pharmaceutical industry. We offer you the production of stainless-steel components in our own workshop especially designed for handling stainless steel. We also offer special surface treatments with glass bead blasting. A just-in-time production of your parts is possible upon request.

HEAT EXCHANGERS

Since 2016 we produce heat exchangers for the steel and aluminium industry as well as the energy generating industry to work at mill furnaces, holding furnaces, batch furnaces, aluminium melting furnaces and post-combustion systems. They are designed for rolling exhaust gas temperatures of up to 1,000 °C, air preheating temperatures of up to 650 °C and tube wall temperatures of up to 850 °C. We process steel (S235JR) and stainless steel in different qualities (1.4301, 1.4571, 1.4828, 1.4713). We deliver the heat exchangers ready for assembly with seals and insulation. We can produce with the following dimensions: width of up to 2.5 m, length of up to 3.6 m, height of up to 6.0 m with a weight of up to 20.0 t.

Certificate DIN ISO 9001

Certificate supporting structures and
construction kits for steel supporting
structure up to EXC according to EN1090

Welding of steel supporting structures
according to DIN EN 1090-2

Inspection as Manufacturer and welding
company according to AD 2000-Technical
bulletin HP 0 and DIN EN ISO 3834-3

Certificate according to §19 I WHG
Certificate Burner Maintenance Marco Lipkow
