

PRESS RELEASE

Reimann GmbH presents its furnace refurbishment portfolio at ALUMINIUM 2024

Mönchengladbach, 13.08.2024 - From October 8 to 10, 2024, Reimann GmbH will be represented at ALUMINIUM 2024 in Düsseldorf. As the world's leading B2B platform for the aluminum industry, the trade fair offers the perfect opportunity to present our extensive portfolio and our latest innovations in the field of furnace refurbishment.

Innovations under the banner of the energy transition

Reimann GmbH attaches great importance to energy and resource efficiency. In times of rising raw material prices and energy costs, coupled with the ongoing shortage of skilled workers, efficient and sustainable solutions are more important than ever. "Furnace refurbishment is one of the most important future fields for Reimann GmbH. That's why we have been continuously investing in our own innovations in the field of furnace refurbishment for years," explains Jürgen Kreutzer, Managing Director of Reimann GmbH.

Energy-efficient solutions for industry

The focus of our trade fair presence this year is on solutions for energy-efficient industrial furnace refurbishment. We offer our customers the installation of resistance heating systems and the conversion of existing furnaces from natural gas to electric heating. These measures are our response to the industry's urgent need for more environmentally friendly energy sources and efficient energy use. We are convinced that electrical process heat generation, especially resistance heating, will play a decisive role in modernization and new installations.

Technical developments and challenges in the industry

The aluminum industry is facing major challenges. Rising raw material prices, a shortage of skilled workers and high energy costs are presenting companies with considerable problems. In view of geopolitical developments, such as the Ukraine-Russia war, there is no relief in sight in the short term. "In order to counter the supply bottlenecks, we, like many other companies in the industry, have invested in increased warehousing and are using alternative materials or steel grades where possible," says Kreutzer.

Meet us in Hall 6, Stand G19

Visitors to ALUMINIUM 2024 are cordially invited to visit us in hall 6 at stand G19. Find out about the advantages of our solutions on site and let us convince you of our innovations. You can also find more information on our website www.reimann-gmbh.com.

PRESS RELEASE

About Reimann GmbH

Reimann GmbH is an industrial manufacturer and, with its high-quality products, has been an important supplier to the German and European mechanical and plant engineering industry for 50 years. With the claim "excellence in industrial solutions", the company combines the claim to be a competent and reliable partner for customers and to offer innovative solutions.

Under the leadership of owner and managing director Jürgen Kreutzer, Reimann has developed from a steel construction company into an industrial manufacturer and specialist for the refurbishment of industrial furnaces in just under 10 years. The family business takes on complex industrial projects in the business areas of industrial furnaces, technical insulation, stainless steel production, boiler production, pipeline construction, steel construction and sheet metal processing for national and international customers. In addition to on-site maintenance and assembly work, prefabrication in the company's own production halls at its headquarters in Mönchengladbach is a core competence of Reimann GmbH.

Reimann GmbH's customers include well-known companies and groups such as ALUNORF, GE Grid, Constellium, TRIMET Aluminium, Novelis, Aluminium Duffel, Martinrea, Otto Fuchs, SMS MEER, RWE, ThyssenKrupp and Mitsubishi Hitachi Power System Europa GmbH.
